Geometric Instruments

1) Measure each interval to the nearest mm.

2) Measure this angle

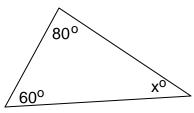

3) Construct the perpendicular bisector of this interval using a compass, clearly showing all parts of the construction.

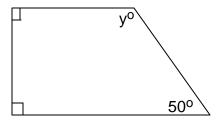

5) Accurately divide the interval PQ into 3 equal parts.

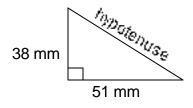

1b name

6) Find the pronumeral by calculating, not measuring.

7) Using a set square and ruler, accurately draw this right angle triangle and measure the hypotenuse.
